Epirus - The Azure Blockchain Service Explorer

A successful blockchain deployment relies on more than smart contracts, you need full visibility of your applications and a great user experience. Epirus for Azure Blockchain Service provides this, enabling you to make fast and informed decisions that affect your business.

- A rich environment supporting your blockchain deployments
- Easily navigate your tokens and smart contract assets
- Intuitive user experience
- Advanced search, filtering and sorting capabilities

Manage Blockchain Assets

- Gather and track critical transaction data & tokenized assets
- Smart contract management and monitoring
- Behavior of live smart contracts can easily be explored by operations team

Business Intelligence and Reporting

- Exposes powerful API
- Dashboard provides accessible view of key metrics
- Easily develop reports to provide business driven insights into your blockchain applications

Powerful User Experience

- Unique insights with filtering and sorting
- Clean layout designed for both business and technical users
- Create custom labels for addresses and accounts

We recommend to all of our partners and customers using Azure Blockchain Service that they make use of Web3 Labs’ Epirus for its exceptional user experience and insights it provides.

Marley Grey
Principal Architect,
Azure Blockchain Engineering
Provide your users with an accessible view of your blockchain applications and assets

**Designed for humans**
- No developer support required to view your blockchain
- Clearly defined key metrics
- Single point of reference for business and technical staff

**Full support of private transactions**
- Visibility of all private blockchain assets and transactions
- The only blockchain explorer that supports private transactions in Azure Blockchain Service and Quorum networks

**Control your data**
- Epirus runs within your existing Azure subscription
- Data resides on Azure Managed Disks
- Take full advantage of Azure security features
